

Abdelrahman Saeed

Artificial Intelligence Engineer

abdelrahman.saeed.eng01@gmail.com | 01507835655 | Cairo - Egypt | [LinkedIn](#) | [Portfolio](#) | [Website](#)

CAREER OBJECTIVE

junior AI Engineer Specialist with a strong software engineering background in Python, C#, and C++. Experienced in building end-to-end AI solutions, including data processing, feature engineering, model development, evaluation, optimization, deployment, and integration with backend systems. Hands-on experience with LLMs, AI agents, RAG pipelines, and AI-powered automation. Improved decision accuracy by 30% and model performance by 25–40% across classification and regression tasks, while reducing manual effort by 85% through scalable, production-ready AI solutions.

EDUCATION

Computer Science and IT - Al-Ahram Canadian University

(2022 - 2026)

Major: AI Engineer

Grade: Very Good (3.68 out of 4)

WORK EXPERIENCE

AI Automation Intern — Orange Egypt

SEP 2026 – OCT 2026

- Developed AI Agents and Agentic Automation in UiPath Studio Web, integrating LLMs with tools, memory, and context for intelligent decision-making; deployed agents that work with email and WhatsApp.
- Built enterprise-grade Dispatcher/Performer automations with the UiPath REFramework, including configuration, assets, transaction queues, business/system exception handling, and structured logging.
- Automated data extraction, processing, and transformation across PDFs, Excel workbooks, Google Sheets, and email.
- Applied UiPath UI Automation for web and desktop apps: clicking, typing, navigation, element manipulation.
- Combined RPA with AI-driven capabilities to build reliable, scalable, maintainable solutions.
- Combined traditional RPA workflow automation with AI-driven capabilities, applying RPA and AI integration best practices to design reliable, scalable, and maintainable solutions.

AI Engineer — Logan Travel (Freelancer)

JUN 2026 – AUG 2026

- Designed and independently built an end-to-end AI Agent automating document analysis, summarization, and reporting across Excel, PDF, DOCX, CSV, and TXT.
- Engineered an Arabic Excel analysis pipeline handling complex workbooks with merged cells, irregular tables, and 24+ sheets across sales, accounting, inventory, and employee data.
- Built an LLM-powered query-routing system that dynamically selects between RAG and structured Excel analysis, generating validated JSON queries and executing aggregations with Pandas.
- Developed a hybrid RAG pipeline using Unstructured, Sentence Transformers, Chroma, BM25, RRF, and Cohere reranking with Qwen3 and Gemini 2.5 Flash; reduced report-generation time from 30–45 minutes to ~5 minutes while maintaining accurate results reviewed by management and integrated the system into production.

Web Developer / Bot Developer (Freelancer)

NOV 2024 – MAR 2025

WhatsApp Customer Service Bot

- Cut customer service response times by 40% by architecting an automated WhatsApp bot integrated with Meta's Business API
- Empowered non-technical teams to manage support categories, issues, and solution links autonomously through a custom no-code admin panel — zero codebase changes required
- Designed and deployed RESTful APIs using Flask, handling 120 daily customer interactions
- Shipped and deployed the end-to-end system from zero to production on Railway, independently owning the frontend, backend, infrastructure, deployment, and environment configuration.

TECHNICAL SKILLS

- **Programming Languages:** C++, Python, C#, Excel, Dart
- **AI Frameworks:** Sklearn, Plotly, NumPy, Pandas, TensorFlow, joblib, Matplotlib, Keras, LangChain, Streamlit, Ai agent, Multi-agent, Agentic system
- **AI Automation & Workflow Engineering:** RAG Chatbots, Business Process Automation, OCR Automation, API Integrations, AI Automation
- **LLMs & AI Engineering:** Embedding Models (Cohere, OpenAI, HuggingFace), Fine-Tuning & Prompt Engineering, RAG (Retrieval-Augmented Generation) Systems
- **Databases:** SQLite, MySQL, PostgreSQL, Microsoft SQL Server, SQL
- **Backend Framework:** Django, Flask, FastApi, Authentication (JWT, OAuth2), RESTful API Design & Implementation
- **version control:** Git, Github
- **Architecture:** RESTful API Design, CRUD, REST inference endpoints
- **Data Science:** Machine learning, Deep learning, statistical models

TECHNICAL PROJECTS

Deep Learning — Smart Stock ERP System

graduation project – 2026 | Grade A

- Designed and trained a GRU neural network (sliding 30-day window) to forecast 30-day sales revenue from historical ERP transaction data, using autoregressive multi-step forecasting.
- Built the full data pipeline: extracted invoices from MySQL, aggregated daily sales, engineered calendar features (day-of-week, month, event flags), and applied log-scaling/normalization.
- Built a retraining pipeline with early stopping and automated MAPE-based accuracy monitoring that flags unreliable forecasts and triggers retraining.
- Integrated the model into a Node.js/Express backend, exposing forecasts through REST APIs secured with JWT role-based access.
- Independently built the entire ERP backend (employees, inventory, purchasing, inbound/outbound, invoicing, dashboards) with transaction-safe stock logic (row locking) and JWT role-based access control.

Deep Learning — Brain Tumor Classification

Personal Project – 2025

- Data exploration and visualization of MRI images to identify visual differences between brain gliomas and meningiomas, as well as to analyze image size and pixel density.
- Applying intensive data amplification techniques to improve model robustness and generalizability.
- Applied a custom CNN, ResNet50, and VGG16 using transfer learning comparing their performance through accuracy, recall, F1 score, confusion matrices, fine-tuning analysis, and training curves to identify the most effective architecture.

CERTIFICATIONS & COURSES

- Artificial Intelligence | ALX Academy | 2024
- Machine Learning | Mindset Training | 2025
- Deep Learning | Mindset Training | 2025
- AI & Machine Learning Foundations | Sprints | 2025
- HCIA-Big Data | October 6 University | 2025
- Web Development (python) | ITI | 2025

SOFT SKILLS

- Works effectively in Agile and Scrum teams.
- Breaks complex problems into clear, simple steps.
- Explains technical ideas clearly to non-technical people.
- Thinks critically before making technical decisions.
- Researches deeply to find the best solution.
